Projects

CRM-Based Lead Management & Sales Insights System

Product Analytics — Growth — Funnel Optimization

- Designed an end-to-end lead lifecycle tracking system to monitor user movement across the sales funnel.
- Conducted funnel analysis to identify drop-off points and proposed data-driven improvements to increase conversion rates.

SmartAssist AI – Customer Support Automation System

Product Design — Conversational AI — User Experience (GitHub)

- Identified key user pain points and designed structured conversation flows for automation
- Translated business requirements into scalable chatbot workflows improving support efficiency

WhatsApp Chat Analyzer – Business Insights Project

Product Analytics — User Behavior — Data Insights (GitHub)

- Analyzed 10,000+ chat messages to identify engagement patterns and retention signals
- Generated dashboards and reports to support product decisions and feature improvements

Experience

TEACHNOOK ROBOTICS Feb 2023 – May 2023
Robotics Intern *Remote*

- Designed and simulated robotic components using TinkerCad and worked with sensors and motors for basic automation projects.

Certifications & Achievements

- Solved 550+ coding problems across multiple platforms (Link)
- AWS Certified Cloud Practitioner (Link)
- Privacy and Security in Online Social Media (NPTEL) (Link)
- GEN AI Using IBM Watsonx (Link)
